

Candidate Strong

Backend Engineer

PROFESSIONAL SUMMARY

Backend engineer with five years of production Python experience, focused on API reliability, performance, and service ownership.

EXPERIENCE

Senior Backend Engineer - Northstar Systems - 2023 to Present

- Designed and operated Python REST APIs serving 4 million requests per day.
- Reduced p95 API latency by 38 percent through query and caching improvements.
- Owned PostgreSQL schema changes, production rollout plans, and on-call response.
- Deployed services to AWS using Docker and Kubernetes.
- Mentored three engineers and introduced API review checklists.

Backend Engineer - Harbor Analytics - 2021 to 2023

- Built Python data services and documented REST endpoints for partner teams.
- Added service metrics and alerts that reduced repeated incidents by 24 percent.

SKILLS

Python, FastAPI, REST APIs, PostgreSQL, Redis, Docker, Kubernetes, AWS, observability

SELECTED PROJECT

Led a zero-downtime migration of a customer API from a monolith to three services, including load tests, rollback procedures, and production monitoring.
